Easy2Com
Remote Monitoring

In remote locations or when older facilities are retrofitted with new measurement instruments cables for data transmission might be missing.

The Easy2Com remote control solves this issue. Data is transmitted wireless through the mobile network and made accessible on the internet. Access is possible with smartphone, PC or tablet through a clear, easy to use web interface.

The system can also serve as reliable datalog thanks to big data capacity and regular backups.

Product code 759 400

⚬ Open system

⚬ Wireless transission

⚬ All-purpose

⚬ Professionelly maintained server

Applications

All GIMAT instruments and samplers

Instruments of other manufacturers with 4-20 mA output
